'THE DEMON'

Space Heater

Giving you years of reliable, portable heating.

- Light the 'DEMON' in minutes - extinguish in seconds
- No installation necessary - low maintenance
- Stand, floor tray and flue adaptor available

'DEMON' HEATER APPLICATIONS

- Factory, workshop & studio heating
 - Outdoor heating
 - Drying out concrete
- Keeping newborn animals warm
 - Pig and poultry farms
- Orchard and hot house heating
 - Frost damage reduction

The operating principle of the 'DEMON' heater is very simple.

Oil in the bowl is ignited on the surface. Air entering the bowl through the air regulator feeds this fire. The gas rises into the stack, where the main combustion takes place.

There are, in fact, two fires. The size of the bowl fire is controlled by the amount of air entering through the air regulator, which in turn, controls the main fire in the stack. The 'DEMON' is extinguished by closing the air regulator on the filler cap and the spring-loaded butterfly valve in the base of the stack.

FOR THE BEST IN PORTABLE SPACE HEATING INSIST ON
